Government initiatives in Belgium

Actieplan biologische landbouw. Actieplan zoals voorgesteld door de bevoegde minister op 09/06/00, dit ter gelegenheid van de week van de biologische landbouw. 55p.
Brussels, Belgium
Aktionsplan ökologischer Landbau. Aktionsplan der durch befugte Minister am 09.06.00 vorgestellt wurde, anlässlich der ökologischen Landbau-Wochen. 55p.
Brüssel, Belgien

2000

Abstract: *This is the plan of action proposed by the Flemish minister of agriculture and environment to promote the development of the organic sector in Flanders. The document gives an overview of the organic sector in Belgium with focuses on Flanders, an overview of action in the present and past and the objectives of the future actions. The proposed future actions include among other things financial support for the producers, development of a network of model farms, education and promotion, consumer information, development of the organic market, organic farming in sensitive regions, etc.*

Abstract: *Belgium has accepted a 4 years plan to develop his organic farming. The prime minister has announced his objective that 4% of the 561000 hectares of the farming area in Belgium has to be assigned to organic farming by 2004. The number of agricultural exploitations using organic farming methods should be increased with 60% every year.*

Lynggaard KCS

The farmer within an institutional environment. Comparing Danish and Belgian organic farming. *Sociologia Ruralis*, 41(1), 85

2001

Abstract: *This article is about variation in the expansion of organic farming sectors in different countries. It is suggested that variations in the absolute expansion of organic farming may be understood through a theoretical framework emphasizing the importance of the quality of the interrelationships among national institutions within organic farming as well as between organic and conventional agriculture. The theoretical proposition is illustrated by comparing the development in the institutional environment of organic farming in Denmark and Belgium from 1985 to 1999. In the Belgian case, the organic farming sector has expanded slowly due to an institutional environment of organic farming that has developed along regional lines and detached from the institutions of conventional farming. This development is seen as a result of an interrelationship characterized by pure competition where very little dialogue appears between organic and conventional farming. In the Danish case the organic farming sector has expanded throughout the period as a result of a series of creative conflicts, both within the organic farming sectors.*

Juli 1998, Jaargang 104, n°31/32, 11-12.
Leuven, Belgium
1998

Abstract: Towards 2010 Agalev (Green Party in Flanders) wants 10% organic production in Flanders. At the launching of the 'Actieplan' in the Flemish parliament a roundtable discussion was organized with the different actors of the organic farming in Belgium to discuss and analyse the problems of the organic sector and looking for concrete solution in order to give the organic sector a new elan in the direction of 2010. Hereby the organic producers mention that the organic demand is lower than the organic production in Belgium and they ask for financial support. As important for them is also the support of the organic production via independent research and consulting. Also the specific difficulties in the market for organic products are stressed because the specific characteristics of the organic agriculture and horticulture. They also asked for a regulation in the animal production that at that time was not available yet.

The distributors and the processors alert to the situation of distortion of competition where Belgium arrives because of the extra subsidising in the surrounding countries.

Die Haltung von Milchviehhaltern im Meetjesland gegenüber ökologischer Produktion.

Academiejaar 1999-2000, 125p.

Gent, Belgium
2000

Abstract: *In this thesis there is searched for the attitude of dairy farmers in the Belgian region 'Het Meetjesland' towards organic farming. She approaches the conversion to organic production methods as an adoption of a technical innovation, starting from the theory of the expected utility. The information of the study is gathered by means of a survey on 97 dairy farms. 59 farmers found it absolutely impossible to convert to organic farming methods, while 38 farmers did not rule out the possibility of adoption.*

The availability of employees, the search for consumers market, the control of weeds and the uncertainty about income are the most often mentioned blocking factors for conversion. The most important positive element is that organic production is less harmful to the environment, but adopting organic production is not an objective of the farmers.

The hypotheses are tested in a logit analysis. The age of the farmers, the expected decrease in milk production, considerations about the environment and the amount of animals per hectare are some of the factors that play an important part in the process of adoption.

Abstract: *Each year, the Ministry of Small Enterprises, Trades and Agriculture actualises on his website his dossier about organic agriculture in Belgium. Here the ministry gives information about the importance of the organic sector (number of holdings and area) in and outside Belgium, a short overview of the European and Belgian legislation, the monitoring of the sector, the vulgarisation, the financial aides and a list of addresses of institutions active in the organic sector. In annex, a basic guide of DG3, the principles of the regulations for the organic sector to be recognised as a organic producer are given and the necessary conditions to be fulfilled to receive financial support are presented.*

1996

(Organic agriculture in Flanders (B): a sociological analysis of the organic agricultural activity)

Abstract: *The thesis starts with a thoroughly study of the literature concerning the organic agricultural sector in Belgium. By means of depth-interviews of organic farmers in Flanders (mainly Limburg) there is tried to get an answer on different research questions as what is the knowledge level of the organic farmer, how does the conversion period occurs, what does the organic farmers think of the organic organisations and the regulations of organic production, what visions do the organic farmers have about the production of food, and how does react the social environment on the organic farmer and how is the position of the organic farms in an environment where everyone is thinking conventional.*

Evaluatie hectaresteun biologische landbouw. Eindrapport Juni 2000. FLTBW, RUG, 88pp

Gent

2000

Abstract: *The report is an ex-post evaluation of the financial scheme of the Belgium government for the organic agricultural sector between 1994 and 1998.*

Conventional and organic farms are compared based on statistics of conventional farms and on a survey on organic farms

Special attention is given to production factors, risks, complexity of the entrepreneurship and the structural aspects on organic farms. Also the ecological impact of the support scheme is evaluated.

Basisprincipes en perspectieven: bio-landbouw wil uit schaduw treden. Boer & Tuinder, Belgische Boerenbond Januari 1997, Jaargang 103, n°4, 23.

Leuven, Belgium

1997

Abstract: *The evolution of the number of organic agricultural and horticultural farms in Flanders (1991-1995) shows only a slow increase of 5% yearly. Since 1991 the production rules of the organic farming is determined by the EC-regulation 2092/91. Accordance the EC-regulation 2078/92 the Belgian government gives from 1994 on a surface support for 5 years for the organic farmer and the converting farmer. Also a small subsidy is assigned for demonstration activities to BLIVO and Carab. The present tendencies indicate that the market for organic agricultural products is slowly increasing of a small and specialized niche market to a substantial sub-market cf. Austria, Germany and Denmark.*

Liever wat groener: Belgische voeding ontgroeit amateurisme. De Standaard, N.V. Vlaamse Uitgeversmaatschappij, Groot-Bijgaarden, Belgium, 2-3 mei 1998, 21

Abstract: *The recent scandals of hormones in the animal production, the BSE disease, the fear of GMO's decreases the confidence of the consumer in the quality of the conventional food. This has a positive effect on the development of the organic sector. Thanks to the breakthrough of the wholesale distribution, the organic food became a fulfilling alternative for conventional food. This is illustrated by*

Belgian experiences on the level of the producers and market: early initiatives of the government (financial support, regulation, farm information and an adapted distribution network (organic vegetable auction in Kampenhout) help the conventional farms to convert to organic production methods (organic farm 'De dobbelhouve' Antwerp). By meeting the quality wishes of the consumer and an extension of the assortment, the organic sales increase (supermarket in reform and organic food in Merksem).

Biogarantie is the umbrella organisation for the whole organic food chain. The organisation is responsible for the legal label 'Biogarantie' and the monitoring of the independant certification institutes Blik and Ecocert, the organic farmers, processors, wholesaler and retailer

Abstract: *The study tries to get some answers on what future is reserved for the organic agriculture in Belgium, on the profitability of the organic production method, on the economical importance of organic products, the experiences of the consumers with organic products and the willingness of the consumers to buy organic products. The information used in the study is gathered during interviews by Belgian processors and distributors of organic products. Another survey was held by 466 consumers in Belgium to know more about their purchase behaviour.*

(The collection service of organic milk has started)

Abstract: They illustrate the perspectives of organic dairy production at the official start of the collection service of organic milk in Bocholt. It is the organic diary firm Biomilk (Vielsalm) who manages the collection service and takes care of the further sale or own processing. For the organic agriculture there is a premium system. The plant productions have already a **lastenboek** on European level and the terms organic, ecological and organic are protected. The organic animal productions have not got a European **lastenboek**, but there is a detailed **lastenboek** on Belgian level since 1998.

(Marketing strategy for fresh bio-products. Report 3: Distribution structure of organic cultivated vegetables and fruit.)

Abstract: The third report gives a short overview of the Belgian production structure, a profile of organic farmers and a profile of growers organisations. The report analyses the distribution structure of organic vegetables and fruit. This evaluation of the sales, out of various inquiries, contains the existing distribution companies (wholesale business) and the retail (profile of firms and shopkeepers, turnover, merchandising) but also the potential markets: wholesale and retail trade, large scale distribution and consumption (purchase policy and attitude towards organic produced vegetables and fruit). Out of the strong and weak points of the existing and potential markets, recommendations for the marketing mix are formulated and a market strategy, which makes the growth of the marketing of alternative vegetables and fruit possible, is lined out.

April 1990

(Marketing strategy for fresh bio-products. Report 4: Establishment of points of sale).

Abstract: *The fourth report is concentrated on natural food shops, especially shops for organic vegetables and fruit. Also on base of those inquiries, the general profile of a shopkeeper, his task as buyer and seller, his imago (promotion, presentation, ...) is investigated; further the sales strategy of a vegetable and fruit shop, in particular the physical distribution (conditioning of quality and marketing) of a fresh stand; the sales infrastructure (presentation, equipment, assortment and promotion) of a natural food shop specialised in vegetables and fruit are described; finally a comparison of franchising with other trade forms particular for organic products is made. Proposals for the improvement of the market strategy and merchandising of these shops are extracted from the structure results and the marketing theory.*

High expectations in the low countries.

Belgium

1999

Abstract: *This article discusses retailing in Belgium and the Netherlands. In the Netherlands, hypermarkets account for only a 5% share of the retail market, with a higher prevalence of smaller shops. In Belgium, the discount sector accounts for 30% of the market, with convenience stores and forecourt outlets also growing importance. Private-labels in Belgium accounted for 33.7% of shelf-space in 1998, compared with 17% in 1990. Organic foods accounted for 5% of Delhaize store's fresh and meat product turnover. the top three supermarket groups in the Netherlands represent 83% of the market, with discounter holding an 11.5% share.*

Brands hold a 59% share of sales, while private-labels take 20%.

1998

Abstract: This thesis tries to give a wide and complete view of the organic sector in Belgium anno 1998. The following subjects are successively discussed.

Chapter 1: definition of 'organic farming', organic production in Europe, the legal surroundings and the foreseen support for the organic sector in Belgium.

Chapter 2: Different aspects of the organic sector in Belgium

Chapter 3: Organic sector outside Belgium

Chapter 4: Organic market: development of the market, organic consumers, price

Chapter 5: Economic analysis of the organic production

Chapter 6: Projects with as objective the stimulation of the organic sector in Belgium

'Belgisch actieplan' (Biogarantie), 'campagne 10/10 voor bio-landbouw' (Bond Beter Leefmilieu), 'biologisch proefcentrum (PBCT)', the proposal of the European legislation for the organic animal production, 5b-projects (Westhoek and Meetjesland), education and professional training by VAC (Vlaams Agrarisch Centrum)

Situation et perspectives des filières de l'agriculture biologique dans la CEE. Oaris, 142p.
Belgium
1991

(Situation and perspectives of the distribution chain of the organic agriculture in the CEE)

Abstract: After having defined what a organic product is and after having eliminated certain confusions, this study analyses the situation of the distribution chain of the organic agriculture in the different countries of the CEE (Germany, Belgium, Denmark, Spain, France, Ireland, Italy, the Netherlands and the United Kingdom) since the growth of the productions, up to their marketing, at the same time the regulatory aspects and the attitude of the government in the sphere of the promotion for the organic agriculture is examined.

The study presents further the attitude of the great and average surfaces facing their new products, by analysing the experience, the results and the criticisms of 30 of the most biggest European distribution firms (in particular Colruyt, Delhaize, GIB).

The paper concludes with the reality (strengths and weaknesses) and the perspectives of the development of a European organic agriculture market.

Pourquoi et comment l'Etat peut-il agir sur le développement de l'économie sociale? Rapport Final Provisoire, Comité d'accompagnement du 16 février 2000, Project realized by SEED/Fondation Universitaire Luxembourgeoise, Landbouweconomie/RUG, Coopibo/Leuven.
2000

(Why and how can react the government to the development of the social economy?)

Abstract: *The report contains the conclusions of the research concerning new quality networks. The conclusion proposes some conclusions and recommendations for the government.*

The first chapter propose an economical analysis (starting from the transaction cost theory) that justifies the support of the government of these initiatives and gives some details about the organisation problems that occur.

The second chapter analyses the consumer demand and gives some details about the different quality registers for the consumer.

Chapter 3 propose a first sociological analysis of these initiatives by detailing the process of the construction of quality, the difficulties, and the component character of the institutions that allows to reach food quality.

The fourth chapter shows which the modalities and the organisation forms are who allows to define a product, to create the corresponding techniques and finally translate them to the consumer.

Chapter 5 analyses more specifically the role of the government, more specially in the construction of support to initiatives.

Leuven, Belgium
1997

Abstract: *The article describes the case study of the organic farm 'De Dobbelhoeve' of the family De Meuter in Schilde (B). On the farm different branches are developed under the label of 'Biogarantie'. Besides the cattle farm and the horticultural farm there is also an arable production (potatoes and wheat for the special Dobbelhoeve bread), they have laying hens and a production unit for cheese. The commercialisation of the products happens via a farm shop where not only the own products but also other products produced under the 'Biogarantie' label and meat free of hormones are for sale. In the article the main attention is given to the dairy cattle production.*

Cera Foundation, reeks Horizonten, 32p.
Leuven, Belgium
2001.

Abstract: In the first part of the study an overview of the organic sector in Europe is given with
special focus on the production, regulation, certification, monitoring, economic profitability, research
and organisations of the organic sector in Belgium. In the second part, a profile of the organic sector is
described based on a survey held by holdings active in the processing and distribution of organic
products in 1999. 147 holdings of the 396 contacted holdings answered the questionnaire. In the third
part a profile of the organic consumer is given. By questioning 466 persons (62% consumers of
organic products) there is searched to the tendencies in the consumption of organic products. In the
last part three factors crucial in the further development of the organic sector are mentioned: the future
agricultural and environmental policy, the evolution of the prices and the evolution of the consumers
attitude.

Voedingsprodukten.
Gent, Belgium
November 1989
(Marketing strategy for fresh bio-products: Report 2: Demand and consumers behaviour in
Belgium)

Abstract: *The second report analyses, out of an inquiry, the Belgian demand, consumption
behaviour en market potential for bio-products. Belgian consumers of natural food belong mostly to
the age group 25-44 years, with the highest education level and an average income. The motive of
buying is health (especially in the Walloon provinces), also the aspect environment (Flanders) or
taste (especially in Brussels). The organic label is best known in Flanders. The satisfaction is high for
quality, people are most of the time dissatisfied with the price, but they are prepared, when necessary,
to pay a higher price. More than 94 % chose to buy in specialised shops, 1/3 is bought directly at the
farm, 1/4 on the peasant market. Cereal- and meat products are mostly being bought, but the
consumption of bio-vegetables and fruit will increase. After all a favourable future is expected for this
market, because bio-products are known by non-users and 68 % of this group will buy in the future. A
similar consumer profile is observed in the neighbouring countries.*

Techniques de promotion des produits régionaux dans certains pays de la CEE et potentialités en Région Wallonne. Ministère de la Région Wallonne, Conseil supérieur Wallon pour l'Agriculture, l'agro-alimentaire et l'Alimentation, 95p.

Namur, Belgium

1990

(Production techniques of regional products in certain CEE-countries and the potentiality in the Walloon provinces in Belgium)

Abstract: *The European context (tendencies and perspectives of European regulations, the situation of quality products particular in France (labels, certifications of uniformity, organic products, food products out of the mountains, AOC) and in Spain, Luxembourg and the United Kingdom); the behaviour of the consumer towards regional products seen by means of a study of the agency Guy Bachelin Objectives (impact of the quality certification on the consumer, advantages and disadvantages of the regional products and products with a quality mark); the situation in Belgium and in particular in the Walloon provinces (the legislation, initiatives on the matter of quality (ONDAH, PROMAG, ...), organic products) are described.*

In Belgium, the present legislation of the appellations of origin is clearly insufficient and the absence of the coherence between the different initiatives on quality certification risk to confuse the consumer.

There has also to be taken an effort within the framework of the promotion of the certification system.
